

Art Unit: 1793

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Japan 7-149580.

JP '580 suggests the instantly claimed process of making activated lime, ie. calcium oxide, by heating calcium hydroxide at 390-480°C under normal pressure, ie. in air. See the abstract. The use of a gaseous stream would have been obvious to one skilled in the art in order to promote the action of the hot air to contact more surface of the calcium hydroxide. The taught process being the same as that instantly claimed would provide the instantly claimed surface area.

The subject matter as a whole would have been obvious to one having ordinary skill in the art at the time the invention was made to have selected the overlapping portion of the range disclosed by the reference because overlapping ranges have been held to be a *prima facie* case of obviousness, see *In re Malagari*, 182 USPQ 549.

Applicant's arguments filed October 27, 2009 have been fully considered but they are not persuasive.

Applicant argues that there is no teaching of thermal decomposition of calcium hydroxide in a gaseous stream, such as a combustion gas or air, to form calcium oxide.

However this argument is not commensurate in scope with the instant claims since in claim 1 only a gaseous stream is recited and in claim 6 only contacting with hot air is recited.

Applicant argues that the taught surface area of greater than $5 \text{ m}^2/\text{g}$ does not lead to the instantly claimed "consisting of" process which requires a limited range of surface area.

However because the taught process is the same as that instantly claimed said limited range of surface area would be expected in the calcium oxide product. Also, JP '580 teaches a surface area of at least $5 \text{ m}^2/\text{g}$ which overlaps that instantly claimed and teaches a heating time of at least 5 minutes which suggests the instantly claimed "sufficient time."

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Steven Bos whose telephone number is 571-272-1350. The examiner can normally be reached on M-F, 9AM to 6PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Stan Silverman can be reached on 571-272-1358. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
